

TEMPORARIES INSTRUCTIONS

Your tooth has been prepared for a crown and a temporary has been placed to protect your tooth.

- 1) Avoid sticky foods, as the temporary might come off.
- 2) Keep the temporary clean by brushing and rinsing the area with warm salt water.
- 3) If the temporary does come off, please return to our office as quickly as possible for re-cementation.
- 4) If you are unable to get to our office, please place Vaseline in temporary and put back on your tooth to prevent sensitivity.
- 5) Slight sensitivity is normal and, if needed, over-the-counter pain relief medications can be taken, i.e.; aspirin or Tylenol.
